

Why a certificate with ITALIAN INSTITUTE QUALITY CERTIFICATION ?

The usefulness and convenience in choosing our Institute as partner will identify our brand, Italian Quality Certification Institute, which is synonymous recognized worldwide, comparable to MADE IN ITALY, universal testimony of quality, culture and tradition.

The client decides during selection of certificate companies on the basis of various motives and expectations. From our point of view, we consider the following three factors most important:

The auditor personality - in the team we place auditors who, apart from definite knowledge of the standards and certificate procedure, have over and above got experience in the area of real business dealings and are able to carefully judge the application of the elements of the standard in such a way so as to really raise the quality of production and at the same time keep the client's competitiveness in his field. Also, we apply the principle that the auditor must be experienced in the field of our client's business dealings.

Practicality and simplicity - all the applied requirements of the standard are judged in such a way so as to be useful for the firm's operation. We look for the ideal combination between simplicity of system control and ensuring the required quality. All the contingent remarks or disagreements are suggested in such a way so as not to be formal and useless and even counterproductive.

Price - while setting our prices for certificated services, we respect the fact that the client, in order that he himself maintains his competitiveness, must keep his costs at a reasonable level and under control. Therefore we try to offer fair prices

Certificazione di processo, UNI EN ISO 9001 : 2008

The **ISO 9000** family of standards is related to quality management systems and designed to help organizations ensure that they meet the needs of customers and other stakeholder while meeting statutory and regulatory requirements related to the product. The standards are published by ISO, the **International Organization for Standardization**, and available through **National standards bodies**. **ISO 9000** deals with the fundamentals of quality management systems, including the eight management principles on which the family of standards is based. **ISO 9001** deals with the requirements that organizations wishing to meet the standard have to fulfill

1. Creates a more efficient, effective operation
2. Increases customer satisfaction and retention
3. Reduces audits
4. Enhances marketing
5. Improves employee motivation, awareness, and morale
6. Promotes international trade
7. Increases profit
8. Reduces waste and increases productivity
9. Common tool for standardization.

Certificazione di Prodotto , Marchio C E .

The **CE marking** as it has been legally called since 1993 (per directive 93/68/EEC)(Decision 93/465/EEC), or formerly **EC mark**, is a mandatory conformity marking for products placed on the market in the European Economic Area (EEA).

With the **CE** marking on a product, the manufacturer declares that the product conforms with the essential requirements of the applicable **EC** directives

Certificazione Ambientale, UNI EN ISO 14001 – est. EMAS

ISO 14001 standard

ISO 14001 sets out the criteria for an environmental management system. It does not state requirements for environmental performance, but maps out a framework that a company or organization can follow to set up an effective environmental management system. It can be used by any organization that wants to improve resource efficiency, reduce waste and drive down costs. Using **ISO 14001** can provide assurance to company management and employees as well as external stakeholders that environmental impact is being measured and improved. **ISO 14001** can also be integrated with other management functions and assists companies in meeting their environmental and economic goals.

ISO 14001 is known as a generic management system standard, meaning that it is relevant to any organization seeking to improve and manage resources more effectively. This includes:

- single site to large multi-national companies
- high risk companies to low risk service organizations
- manufacturing, process and the service industries; including local governments
- all industry sectors including public and private sectors
- original equipment manufacturers and their suppliers.

All standards are periodically reviewed by **ISO** to ensure they still meet market requirements.
